DECLARATION

I, Harshita Singh, student of the Post Graduate Diploma in Management (PGDM) at the Fortune Institute of International Business (FIIB), New Delhi, hereby declare that this Final Corporate Internship Programme (CIP) Report titled:

"**AI-Powered Corporate Prospect Intelligence Assistant for Client Knowledge Management in Corporate Travel Operations at Udaan India Pvt. Ltd**."

is my original work carried out under the guidance of **Prof. Alok Tewari (Faculty Supervisor)** and **Ms. Amisha Chauhan (Organizational Supervisor)** during my Corporate Internship Programme at Udaan India Pvt. Ltd. from **6th May 2026** to **15th July 2026**.

This report is based on my observations, practical learning, organizational interactions, and project implementation undertaken during the internship. The work presented has not been submitted, either in part or in full, to any other institution or university for the award of any degree, diploma, or certification.

All information obtained from the organization has been used solely for academic purposes while maintaining confidentiality and professional ethics. Appropriate references have been provided wherever secondary information has been used.

The similarity report generated through the prescribed plagiarism detection software has been attached separately as per the institute's guidelines.

Signature: _____

Name: Harshita Singh

Roll Number: 25PGDM080

Programme: PGDM (2025–2027)

ACKNOWLEDGEMENT

The successful completion of this Corporate Internship Programme and the preparation of this report would not have been possible without the support, encouragement, and guidance of several individuals.

I express my sincere gratitude to Udaan India Pvt. Ltd. for providing me with the opportunity to undertake my internship and gain practical exposure to the corporate travel and visa facilitation industry.

I am especially grateful to **Ms. Amisha Chauhan, Assistant Manager – Core Sales**, for her constant guidance, encouragement, and valuable insights throughout the internship. Her mentorship enabled me to understand organizational processes and successfully develop the **AI-powered knowledge management solution** presented in this report. I also extend my appreciation to **Mr. Harsh Sehgal, Assistant Manager – Operations**, for his constructive feedback and support during the evaluation of the solution prototype.

I would like to express my heartfelt gratitude to **Prof. Alok Tewari, Faculty Supervisor** at **the Fortune Institute of International Business (FIIB), New Delhi**, for his continuous academic guidance, valuable suggestions, and encouragement throughout the internship programme. His support helped me complete this project in a structured and meaningful manner.

I also extend my sincere thanks to the faculty members and staff of FIIB for designing an industry-oriented internship programme that provided an excellent platform to apply classroom learning in a real business environment.

Finally, I would like to thank my family and friends for their constant motivation, encouragement, and unwavering support throughout this journey.

Harshita Singh

Roll No.: 25PGDM080

PGDM (2025–2027)

Fortune Institute of International Business (FIIB), New Delhi

FACULTY MENTOR CERTIFICATE

This is to certify that **Ms. Harshita Singh (Roll No. 25PGDM080)** has successfully completed the **Corporate Internship Programme (CIP)** and submitted the Final Internship Report titled:

"AI-Powered Corporate Prospect Intelligence Assistant for Client Knowledge Management in Corporate Travel Operations at Udaan India Pvt. Ltd."

The project was carried out under my academic supervision as a part of the **Post Graduate Diploma in Management (PGDM)** curriculum of the **Fortune Institute of International Business (FIIB), New Delhi**.

The internship was undertaken at **Udaan India Pvt. Ltd.** during the period **April 2026 to June 2026**. The report reflects the student's sincere efforts in understanding organizational processes, identifying operational challenges, and developing an AI-enabled knowledge management solution to improve information retrieval within corporate travel operations.

To the best of my knowledge, the work presented in this report is original and has been completed in accordance with the academic requirements of FIIB. The student has also fulfilled all internship-related requirements, including project presentation, report submission, and academic evaluation.

EXECUTIVE SUMMARY

This report documents the development and demonstration of an AI-powered Corporate Prospect Intelligence Assistant designed to address critical information retrieval challenges faced by corporate sales and client servicing teams at Udaan India Pvt. Ltd. During the 10-week summer internship in the Corporate Travel Division, the intern identified a significant operational bottleneck: team members frequently struggled to access client-specific information, travel policies, service agreements, and operational guidelines from the organization's unstructured document repositories, resulting in delayed responses and operational inefficiencies.

The AI solution was built using Dify AI's knowledge assistant platform, creating a centralized repository that ingests client onboarding documents, service agreements, travel policies, approval workflows, and billing structures. The chatbot enables natural language querying of this repository, retrieving context-aware responses in real-time, thereby reducing the time spent on manual document searching from an estimated 15–20 minutes per query to under 30 seconds.

The solution was demonstrated to the Assistant Manager (Core Sales) and Assistant Manager (Operations), who validated its effectiveness in improving response times and reducing operational dependency on individual team members. While the solution achieved Level 2 deployment (team-level demonstration and use), broader organizational adoption would require integration with live CRM systems, role-based access controls, and enhanced data security measures.

The internship experience provided valuable insights into the B2B travel technology sector, corporate mobility services, and the practical applications of artificial intelligence in streamlining sales operations. Key learning outcomes include enhanced understanding of corporate visa processing workflows, client relationship management in the travel industry, and the implementation of AI solutions within organizational constraints.

1. INTRODUCTION

1.1 Background and Significance

Udaan India Pvt. Ltd., established in 1992, is a premier visa facilitation and corporate travel services firm headquartered in New Delhi, with branch offices in Mumbai, Chennai, and Bangalore. With over three decades of expertise, the company has built a reputation as a trusted partner for corporates, MICE groups, and high-net-worth individuals, delivering seamless visa solutions with precision and care. The organization's annual turnover is approximately ₹14.2 crore, with a workforce of approximately 199 employees.

The corporate travel and visa facilitation industry in India has witnessed significant transformation, driven by increasing international business travel, the rise of remote work arrangements, and the growing complexity of visa regulations across multiple jurisdictions. Organizations like Udaan must continuously evolve their service delivery models to maintain competitive advantage in this dynamic landscape.

1.2 Problem Identification

The core problem identified during the internship involved the manual and time-consuming process of retrieving client-specific information. Corporate sales teams, account managers, and operations personnel frequently need to access:

- Client onboarding documents and contracts
- Service-level agreements and billing structures
- Travel policies and approval workflows
- Visa requirements and documentation guidelines
- Preferred airlines and hotel preferences
- Client-specific operational instructions

Currently, this information was scattered across multiple sources: onboarding documents, email threads, shared folders, personal notes, and informal knowledge transfer through calls and chats. This fragmented approach resulted in:

- Delayed response times to client queries
- Inconsistent information across team members
- Operational dependency on individual employees
- Reduced efficiency in urgent travel request processing

1.3 Rationale for AI Solution

Artificial Intelligence presents a viable solution to this information retrieval challenge for several reasons:

- AI systems can process and understand unstructured documents (PDFs, Word files, emails)
- Natural Language Processing enables conversational querying without requiring technical expertise

- Knowledge bases can be continuously updated with new client information
- AI ensures consistent responses across teams, reducing dependency on individual knowledge holders

The objective was to build a prototype that demonstrates the feasibility and value of an AI-powered knowledge assistant within Udaan's operational context.

2. INDUSTRY ANALYSIS

2.1 Industry Overview

The Indian visa facilitation and corporate travel management industry operates at the intersection of travel, technology, and regulatory compliance. The industry serves:

- Corporate clients requiring business visa processing
- Leisure travelers seeking tourist visas
- MICE (Meetings, Incentives, Conferences, Exhibitions) groups
- High-net-worth individuals requiring concierge-level service

Key industry players include VFS Global, BTW Visa Services, and CMB Regional Centers, with Udaan positioning itself as a leading visa concierge service provider.

2.2 Industry Size and Growth Trends

The Indian outbound travel market has experienced consistent growth, driven by:

- Rising disposable incomes in urban and semi-urban areas
- Increasing international business collaborations
- Expansion of the Indian diaspora and family visits
- Growth of the MICE tourism segment
- Government initiatives like e-visa schemes for foreign nationals

The visa facilitation segment, while niche, is critical to the broader travel ecosystem, as visa acquisition is often the first and most critical step in international travel planning.

2.3 Maturity of the Industry

The visa facilitation industry has evolved from a predominantly manual, paper-intensive process to a technology-enabled service. Key milestones include:

- 2000: Udaan pioneered the online visa tracking system in India
- 2000s–2010s: Digitization of application forms and document submission
- 2010s–present: Integration with government e-visa systems, mobile applications, and AI-enabled assistance

While core visa processing remains regulated by government authorities, the facilitation segment has become increasingly competitive, with differentiation driven by service quality, response time, and technology adoption.

2.4 External Economic Factors

Economic factors affecting the industry include:

- Exchange rate fluctuations affecting travel affordability
- Economic growth and corporate travel budgets
- Employment rates and business confidence
- Political stability and bilateral relations affecting visa policies

2.5 Seasonality

Visa processing volumes exhibit seasonality:

- Peak: April–June (summer holidays), October–December (festive season)
- Trough: January–February, July–September
- Corporate travel patterns often counterbalance seasonal dips

2.6 Technological Factors

Technology adoption is reshaping the industry:

- Online visa application portals
- AI-powered document verification and validation
- Mobile-first customer interfaces
- Integration with airline and hotel booking platforms
- Real-time application tracking

Udaan's partnership with Akasa Air for seamless visa services and integration with CSC Safar for rural reach exemplifies this technological transformation.

2.7 Regulatory, Political, and Legal Concerns

The visa facilitation industry operates within a complex regulatory framework:

- Government visa policies and eligibility criteria
- Bilateral agreements between countries
- Data protection and privacy regulations
- Anti-money laundering and know-your-customer (KYC) requirements

2.8 Competitive Environment

The competitive landscape is characterized by:

- Presence of large global players (VFS Global) and specialized local players
- Competition on service quality, response time, and price
- Increasing importance of technology and digital capabilities
- Partnerships with airlines and travel platforms as differentiation strategy

2.9 Key Challenges Facing the Industry

1. **Regulatory Uncertainty:** Frequent changes in visa policies and requirements
2. **Data Security:** Handling sensitive personal and corporate information
3. **Technological Disruption:** Need to continuously adapt to digital trends
4. **Talent Management:** Requirement for specialized visa knowledge and customer service skills
5. **Scalability:** Managing volume fluctuations while maintaining service quality

2.10 Connecting Industry Analysis to Career Aspirations

The industry analysis reveals significant opportunities for professionals with capabilities in:

- Technology integration and digital transformation
- Process optimization and operational efficiency
- Data analytics and business intelligence
- Customer relationship management
- Strategic partnerships and business development

The internship experience at Udaan has provided hands-on exposure to these areas, particularly in technology-enabled sales operations and AI solution development, positioning the intern for careers in corporate travel management, business development, or technology consulting within the travel and mobility sector.

3. COMPANY SNAPSHOT

3.1 Nature of Business

Udaan India Private Limited is a service provider offering visa facilitation and corporate travel management services. The company operates in the B2B travel tech/corporate mobility services sector, providing customized solutions to:

- Travel agents and travel management companies
- Corporate clients
- Individual travellers
- MICE groups
- High-net-worth individuals

3.2 Vision and Mission

Vision: To be the most respected and preferred company for all stakeholders and business partners.

Mission: To simplify the complex travel visa process, liberating clients from the hassles associated with visa processing by providing simplified visa facilitation services.

3.3 Product/Service Range

- Corporate visa processing (UK, US, Schengen, Far East, and other destinations)
- E-visa processing
- Travel visa concierge services
- Corporate travel management
- MICE travel support
- Document guidance and appointment scheduling
- Online visa tracking systems
- Partnership services (Akasa Air, CSC Safar collaboration)

3.4 Organizational Size

Metric	Value
Founded	1992
Annual Turnover	Approximately ₹14.2 crore (FY 2025)
Employee Count	Approximately 199 (as of April 2026)
Locations	New Delhi (HQ), Mumbai, Chennai, Bangalore

3.5 Organizational Structure

The company operates under the leadership of:

- **Rajan Dua**: Founder & Managing Director
- **Pukhraj Joneja**: Chief Executive Officer
- **Seema Rajan Dua**: Director

The board includes independent directors and key team members managing operations, sales, client servicing, and technology functions.

3.6 Market Position

Udaan positions itself as a leading visa concierge firm in India, distinguished by:

- Over 30 years of industry experience
- Pioneering the online visa tracking system in India (2000)
- Strategic partnerships with airlines (Akasa Air) and government bodies (CSC Safar)
- Reputation for seamless, secure, and priority visa solutions

3.7 Key Competitors

- VFS Global
- BTW Visa Services
- CMB Regional Centres

3.8 Key Challenges for the Organization

1. **Technology Evolution:** Maintaining competitive advantage through technology adoption
2. **Client Retention:** Providing consistent service quality across diverse corporate clients
3. **Regulatory Compliance:** Navigating complex visa regulations across multiple countries
4. **Scalability:** Managing growth while maintaining service quality and employee expertise
5. **Knowledge Management:** Reducing operational dependency on individual team members

4. RESEARCH PROJECT

4.1 Project Objectives

The primary objectives of the research project were:

1. **Identify Operational Bottlenecks:** Analyze the current process of client information retrieval in corporate sales and account management functions to identify inefficiencies and pain points.
2. **Design an AI-Powered Solution:** Build a prototype AI knowledge assistant that addresses the identified problems by enabling rapid, accurate retrieval of client-specific information.
3. **Demonstrate Feasibility and Value:** Showcase the solution to organizational stakeholders, collecting feedback on its effectiveness and potential for broader deployment.
4. **Document Implementation Insights:** Record the process, challenges, and outcomes to inform future AI adoption initiatives within the organization.

4.2 Methodology

4.2.1 Research Design

This project adopted a design science research approach, combining:

- Problem diagnosis through observation and stakeholder interviews
- Solution design and prototyping using AI platform
- Demonstration and validation through organizational feedback
- Evaluation of solution effectiveness and deployment feasibility

4.2.2 Research Approach

The approach was predominantly **inductive**, involving:

- Observing team operations and information retrieval workflows
- Identifying recurring pain points in client servicing
- Learning from team members' experiences with document management
- Iteratively designing and refining the AI solution based on feedback

4.2.3 Research Methods

1. **Observational Method:** Daily observation of corporate sales and operations teams to understand client information retrieval processes and pain points.
2. **Stakeholder Interviews:** Informal discussions with the Assistant Manager (Core Sales), Assistant Manager (Operations), and team members to validate the problem and gather requirements.
3. **Document Analysis:** Review of sample onboarding documents, travel policies, service agreements, and operational guidelines to understand data structures and information needs.

4. **Prototyping and Testing:** Development of an AI chatbot using Dify AI, followed by testing with sample queries and team feedback.

4.2.4 Data Sources

Source	Purpose
Sample Client Onboarding Documents	Build knowledge repository
Service Agreements and Account Information	Train chatbot on client-specific data
Corporate Travel Policies	Enable policy clarification queries
Operational Guidelines	Support process-related questions
Team Feedback Sessions	Validate solution effectiveness

4.2.5 Sampling Strategy

A purposive sampling approach was used, selecting representative corporate client documents that reflected the diversity of account types, industries, and service agreements handled by Udaan. This ensured the prototype could demonstrate its effectiveness across varied client profiles.

4.3 AI Solution Design and Development

4.3.1 Solution Overview

The AI-powered Corporate Prospect Intelligence Assistant was developed using Dify AI, an open-source platform for building AI applications. The solution functions as a centralized knowledge assistant that ingests client-related documents and enables natural language queries for instant information retrieval.

4.3.2 Development Process

Step 1: Client Knowledge Repository Creation

- Gathered representative sample documents (onboarding packets, service agreements, travel policies)
- Uploaded documents to Dify AI's knowledge base
- Structured data to enable context-aware retrieval

Step 2: Intelligent Information Retrieval

- Configured the chatbot to understand natural language queries
- Implemented semantic search capability to find relevant information across documents
- Enabled context-aware responses that synthesize information from multiple sources

Step 3: Prompt Engineering

- Designed chatbot instructions to ensure consistent, professional responses

- Structured prompts to handle common query types (policy retrieval, client history, approval workflows)
- Tested and refined prompts based on team feedback

Step 4: User Interface

- Deployed a simple web-based interface for querying the knowledge base
- Enabled conversational interactions with the AI assistant
- Provided sample questions to guide users

4.3.3 Tools and Technologies

Tool/Platform	Purpose
Dify AI	Core platform for building and deploying the knowledge assistant
ChatGPT	Prompt design and solution conceptualization
Client Onboarding Documents	Data source for knowledge repository
Prompt Engineering	Improving chatbot instruction quality

4.3.4 Solution Capabilities

The chatbot generates real-time, conversational responses to employee queries, including:

1. **Instant Client Information Retrieval:** Quick access to client-specific data without manual document searching.
2. **Policy and Process Clarification:** Clarification on travel policies, approval workflows, and operational procedures.
3. **Knowledge Consolidation:** Synthesis of information from multiple documents into coherent responses.

4.3.5 Limitations

The current solution has the following limitations:

- Access limited to uploaded sample documents, not live organizational systems
- No role-based access controls to restrict information visibility
- Lacks integration with internal CRM and document management systems
- Basic security measures without enterprise-grade data protection
- Limited to English language queries
- Performance depends on document quality and completeness

4.4 Deployment and Demonstration

4.4.1 Deployment Level Achieved

Level	Description	Achieved
1	Demonstrated in context — shown to supervisor or team member	✓
2	Team-level use — at least one other person used it during internship	✓
3	Organizationally adopted — continued use confirmed beyond internship	✗

Level 2 Achieved: The chatbot was successfully demonstrated to the Assistant Manager (Core Sales) and Assistant Manager (Operations), who tested it with real business questions and validated its effectiveness.

4.4.2 Demonstration Process

The demonstration involved:

1. Creating a knowledge repository with sample client onboarding documents and travel policies
2. Connecting the repository to Dify AI's chatbot interface
3. Testing real-world business queries relevant to corporate sales and operations

Sample Queries Tested:

- "What are the visa requirements for [Client] to send employees to the UK?"
- "What is the approval workflow for urgent travel requests at [Client]?"
- "Show me the billing structure and payment terms for [Client]"

4.4.3 Organizational Response

Name/Role	Engagement	Observation
Amisha Chauhan, Assistant Manager (Core Sales)	Reviewed workflow, tested business queries	Information retrieval significantly faster than manual searching
Harsh Sehgal, Assistant Manager (Operations)	Tested with sample client questions	Useful for locating client-specific travel policies and operational requirements

Direct Quote:

"The chatbot provides a much faster way to access client-specific information compared to manually searching through multiple onboarding documents. It has the potential to improve response times and reduce operational dependency on individual team members." — **Amisha Chauhan, Assistant Manager**

4.4.4 Barriers to Broader Deployment

While the demonstration was successful, broader organizational deployment faced the following barriers:

- Access restrictions to production-level client data
- Need for additional approvals before AI integration into live workflows
- Limited internship duration preventing extensive user testing and system integration
- Data security and privacy concerns requiring governance protocols

4.5 Organization Response (Section 4 of AI Deliverable)

4.5.1 Who Saw or Used the Solution

The AI chatbot was reviewed and tested by:

1. **Amisha Chauhan, Assistant Manager (Core Sales)** — Reviewed the chatbot workflow and tested business queries. Observed that information retrieval was significantly faster than manual document searching. Expressed interest in the concept and its potential for improving team efficiency.
2. **Harsh Sehgal, Assistant Manager (Operations)** — Tested the chatbot using sample client questions. Found the chatbot useful for quickly locating client-specific travel policies and operational requirements. Provided constructive feedback on potential improvements.

4.5.2 Key Observations and Feedback

Observation	Feedback
Speed: Information retrieval took seconds compared to 15–20 minutes of manual searching	"Much faster way to access client-specific information"
Consistency: Responses were consistent across queries	"Reduces operational dependency on individual team members"
Usability: Simple conversational interface required no training	"Easy to use and intuitive"
Potential for Scale: Concept well-received as potential future enhancement	"Has the potential to improve response times significantly"

4.5.3 Interest in Continued Use

While no formal implementation decision was made during the internship period, the concept was positively received and recognized as a potential future enhancement to the organization's client servicing processes. The positive response suggests that:

- There is organizational interest in technology-enabled knowledge management
- The concept aligns with Udaan's historical focus on technology innovation (e.g., first company to launch a visa portal in 2000)

- Further development and testing would be welcomed

4.5.4 Improvements Needed for Broader Adoption

1. **System Integration:** Connection to live client repositories and document management systems
2. **Access Controls:** Role-based permissions for data security
3. **Knowledge Governance:** Regular updates to client policies and operational procedures
4. **Security Validation:** Enterprise-grade security and compliance review
5. **User Training:** Adoption program for team members

4.6 Personal Reflection and Learning Outcomes

4.6.1 New Skills Acquired

1. **AI Solution Development:** Practical experience in building AI applications using Dify AI platform
2. **Prompt Engineering:** Designing and refining prompts for optimal chatbot performance
3. **Knowledge Management:** Structuring organizational knowledge for AI retrieval
4. **Project Management:** End-to-end development from problem identification to solution demonstration
5. **Corporate Sales Operations:** Understanding of B2B sales processes in the travel sector

4.6.2 Knowledge Gained

- Corporate visa processing workflows and regulatory requirements
- Client relationship management in the travel facilitation industry
- Technology adoption challenges in service organizations
- AI implementation considerations within organizational constraints

4.6.3 Challenges Faced and Solutions

Challenge	Solution
Access restrictions to live client data	Used sample documents and anonymized data for prototyping
Limited internship duration	Focused on demonstrable prototype rather than full deployment
Balancing technical solution with business relevance	Maintained focus on solving real operational problems rather than technical complexity

4.6.4 Alignment with Aspirational Job Description

The skills and experiences gained during the internship align with aspirational roles in:

- **Corporate Travel Management:** Understanding of B2B travel operations, client servicing, and technology enablement
- **Business Development:** Exposure to sales processes, account management, and partnership development (Akasa Air, CSC Safar collaborations)
- **Technology Consulting:** Experience in identifying technology opportunities and building prototypes within organizational constraints
- **Operations Management:** Understanding of process optimization and knowledge management

4.6.5 Career Preparation

The internship has prepared the intern for desired career paths by:

1. Providing hands-on experience in the travel and mobility sector
2. Developing technology implementation skills relevant to digital transformation roles
3. Building an understanding of B2B sales and client relationship management
4. Demonstrating the ability to identify and solve operational problems
5. Creating a portfolio piece (AI solution prototype) that showcases technical and business capabilities

5. CONCLUSION, LIMITATIONS, AND RECOMMENDATIONS

5.1 Key Findings

The research project successfully achieved its objectives:

1. **Problem Validated:** The challenge of accessing client-specific information was confirmed as a genuine operational bottleneck through observations and stakeholder discussions.
2. **Solution Demonstrated:** An AI-powered knowledge assistant was developed using Dify AI, demonstrating rapid information retrieval and consistent responses.
3. **Value Recognized:** Organizational stakeholders validated the solution's effectiveness, with Assistant Manager (Core Sales) noting potential for "improved response times and reduced operational dependency" on individual team members.
4. **Deployment Insight:** While organizational deployment was not achieved within the internship timeline, the solution achieved Level 2 deployment (team-level demonstration and use), confirming its practical viability.

5.2 Limitations

1. **Data Constraints:** Access to production-level client data was restricted due to confidentiality concerns.
2. **Scope Limitations:** The solution was demonstrated on a limited sample of documents rather than the full organizational knowledge base.
3. **Time Constraints:** The 10-week internship period limited the ability to conduct extensive user testing, system integration, and security validation.
4. **Technical Constraints:** The current prototype does not integrate with internal CRM and document management systems.
5. **Security Governance:** Role-based access controls and enterprise-grade security measures were not implemented.

5.3 Recommendations

5.3.1 Recommendations for the Organization

1. **Investigate AI Knowledge Management Systems:** Udaan should explore AI-powered knowledge management solutions to address information retrieval challenges, building on the demonstrated prototype.
2. **Develop Data Governance Framework:** Create protocols for secure access to client information, ensuring appropriate permissions and privacy protections.
3. **Plan Phased Implementation:** Consider a phased approach: pilot with a small team using a subset of client data, refine based on feedback, and gradually expand.
4. **Leverage Existing Technology Culture:** Udaan has a history of technology innovation (pioneering online visa tracking in 2000). This culture should be leveraged to support AI adoption.

5. **Collaborate with Technology Partners:** Partnerships like the Akasa Air and CSC Safar collaborations demonstrate successful technology partnerships; similar models could be explored for AI implementation.

5.3.2 Recommendations for Future Interns

1. **Focus on Problem Validation:** Spend initial weeks understanding actual operational pain points through observation and stakeholder discussions.
2. **Build Early Prototypes:** Develop simple demonstrations early to gather feedback and validate direction.
3. **Document Everything:** Maintain detailed records of design decisions, stakeholder feedback, and lessons learned.
4. **Be Practical:** Remember that a simple, functional solution is more valuable than a complex, non-functional one.
5. **Understand Organizational Constraints:** Work within data access, security, and approval constraints while advocating for innovation.
6. **Connect Work to Career Goals:** Reflect on how internship experiences align with career aspirations to maximize learning value.

5.4 Future Work

To enable broader organizational deployment, the following work is required:

1. **System Integration:** Connect the chatbot to live client repositories and document management systems.
2. **Security Implementation:** Develop role-based access controls and data security protocols.
3. **Knowledge Governance:** Establish processes for regular updates to client policies and operational procedures.
4. **Scalability Testing:** Test the solution with larger document volumes and multiple concurrent users.
5. **User Adoption Program:** Develop training materials and change management support.
6. **Integration with Partner Systems:** Explore integration with airline partner systems (Akasa Air) and government platforms (CSC Safar).

6. MANAGERIAL IMPLICATIONS OF THE STUDY

6.1 Practical Implications for Udaan

The study has several practical implications for Udaan's operations and strategy:

1. **Operational Efficiency:** The AI chatbot demonstrates the potential to reduce the time spent on client information retrieval from 15–20 minutes to under 30 seconds per query, significantly improving team productivity.
2. **Knowledge Retention:** By centralizing client information in a searchable knowledge base, the organization reduces dependency on individual team members, mitigating risks associated with employee turnover.
3. **Consistent Service Delivery:** AI-powered responses ensure consistency across team members, reducing the risk of misinformation or inconsistent client servicing.
4. **Competitive Advantage:** As a technology innovator (pioneering online visa tracking in 2000), continued technology adoption reinforces Udaan's market positioning.

6.2 Strategic Implications

1. **Digital Transformation Roadmap:** The project provides a proof-of-concept that can inform Udaan's digital transformation strategy.
2. **Client Service Enhancement:** Faster, more accurate information retrieval can enhance client satisfaction and retention.
3. **Scalability:** AI knowledge management enables the organization to scale operations without linear increases in headcount.
4. **Partnership Opportunities:** Successful AI implementation may create opportunities for enhanced partnership offerings (e.g., AI-powered client portals for partner airlines).

6.3 Short-Term Recommendations

Action	Timeline	Responsibility
Conduct detailed requirements gathering for AI implementation	1 month	Operations & IT teams
Develop pilot project with a small client portfolio	2–3 months	Cross-functional team
Evaluate pilot results and develop business case	1 month	Management
Plan phased organizational rollout	6–12 months	Executive leadership

6.4 Long-Term Recommendations

1. **AI Centre of Excellence:** Establish a team to explore and implement AI applications across business functions.
2. **Knowledge as Asset:** Treat organizational knowledge as a strategic asset, investing in systems to capture, store, and retrieve it effectively.
3. **Technology Partnerships:** Explore strategic technology partnerships to accelerate AI adoption.
4. **Talent Development:** Invest in AI literacy and technology skills for team members.

You are Udaan Enterprise Strategy & Corporate Prospect Intelligence Assistant.
Your purpose is to support Udaan India's Enterprise & Strategy Department in researching, evaluating, and prioritizing prospective corporate clients for onboarding.
Your objective is to reduce manual research efforts and provide standardized, data-driven insights that help the team identify high-potential corporate accounts.
When a company name is provided, analyze the organization and generate a structured assessment covering its industry, business model, employee strength, geographic presence, growth potential, and international operations. Evaluate the company's likelihood of requiring corporate travel, employee mobility, business visas, and cross-border movement services.
Assess potential demand for Schengen, UK, USA, Canada, Australia, and New Zealand

services, the potential volume can be significant.
Factors to consider for estimating annual volume include:
The number of corporate clients they manage and the average travel requirements of these clients.
The frequency and destinations of these trips.
Their current market share and growth rate.
Historical data on the volume of bookings and visa applications processed annually.
To provide a precise estimate, detailed internal data from Brightsun Travel Limited regarding these aspects would be necessary. Without such information, it is challenging to predict an accurate volume. Engaging directly with the company to understand their capacity and projected demand could offer more significant insights.

SUMMER INTERNSHIP PROGRAMME | AI DELIVERABLE

AI Solution Case Write-Up

Student submission template — to be completed and submitted with your CIP report

Student & Internship Details

Student Name	Harshita Singh
Programme & Batch	PGDM | Batch 2025–2027 _____
Organization Name	Udaan (Visa Consultation & Corporate Travel Division)
Industry / Sector	B2B Travel Tech / Corporate Mobility Services
Internship Duration	2.5 Months (10 Weeks)
Faculty Supervisor	Prof. Alok Tewari
Organizational Supervisor	Ms. Amisha Chauhan
Date of Submission	14th July, 2026

About This Deliverable

As part of your CIP this year, you are required to identify one real operational problem at your internship organization, build or prototype an AI-based solution for it, and submit two things:

- This case write-up — documenting the problem, your solution, and the organization's response
- Proof of your solution — a working link, recorded demo, screenshots, or documented workflow (attached separately)

> *Your solution does not have to be technically complex. It has to work on a real problem. A well-designed prompt template that saves your team two hours a week is as valid as a custom-built application. What matters is that the problem is real, the solution works, and you can show it.*

Deployment Levels: What Is Expected of You

Organizations differ in what they will allow a student intern to deploy. You are not penalized for working within your organization's constraints. You are assessed on how seriously you engaged with the problem and how well you documented what you built. Identify which level you achieved and explain why.

LEVEL 1 Demonstrated in Context

You built the solution, used it on real work problems during your internship, and showed the output to your supervisor or a team member. The organization did not formally adopt it, but they saw it work on their actual data or workflows.

Examples: Prompt template demonstrated in a team meeting; custom GPT used to summarize your own work reports; AI-assisted draft shown to your manager

LEVEL 2 Team-Level Use

You shared the solution with one or more colleagues or your supervisor and collected their response. At least one other person in the organization used it during your internship period. No IT approval or formal rollout was required.

Examples: Shared ChatGPT custom GPT via link with team members; Google Sheets AI macro used by colleagues; WhatsApp-based bot shared with field staff

LEVEL 3 Organizationally Adopted

The organization decided to continue using the tool beyond your internship. This may involve a handover, documentation you wrote, or a formal recommendation accepted by leadership.

Examples: Tool handed over with documentation to the team; manager confirmed continued use in writing; solution recommended for broader rollout

> *Level 1 is the minimum acceptable standard. A student who achieves Level 1 with a well-documented, functional solution and honest impact assessment will score well. A student who claims Level 3 without evidence will not.*

Section 1 — Problem Statement

Describe the problem you identified at your organization. Be specific. Avoid generic statements. A good problem statement names who is affected, what they currently do, and how much time or effort that takes.

1.1 What is the problem? Who does it affect, and how?

Udaan's corporate travel and client servicing teams onboard multiple corporate accounts, each with unique travel policies, approval workflows, employee travel requirements, preferred airlines, hotel preferences, visa support needs, billing structures, and service-level agreements. The one who get affected because of this are: Core Sales Team, Account Managers, Operations Teams, Client Servicing Teams.

1.2 How is this problem currently being solved (without AI)?

Currently, the organization relies on manual methods to retrieve client information:

- Employees search through onboarding documents and contracts manually.
- Teams review emails and shared folders to find client-specific policies.
- Account managers maintain personal notes and client trackers.
- Team members frequently contact colleagues who previously handled the account.
- Knowledge transfer occurs informally through calls, chats, and emails.

This approach is time-consuming and inefficient, especially when urgent travel requests need attention.

1.3 Why is AI a viable solution for this problem?

What makes this an information-processing or automation problem that AI can plausibly address?

Artificial Intelligence is well-suited for this challenge because it can understand and retrieve information from large volumes of unstructured documents.

- The AI chatbot can:
- Read and understand client onboarding documents.
- Store client knowledge in a searchable knowledge base.
- Answer employee questions in natural language.
- Retrieve information instantly from multiple documents.
- Provide consistent responses across teams.
- Reduce dependency on individual employees for account knowledge.

1.4 When did you identify this problem, and who confirmed it was real?

The problem was identified during the initial onboarding and account management review process at Udaan while observing how teams accessed client information for travel planning and support activities.
The challenge was confirmed through discussions with operations and account management teams, who highlighted that locating client-specific information often required reviewing multiple documents and consulting colleagues, resulting in operational delays and inefficiencies. The person who identified was my Team Lead, Miss Amisha Chauhan.

Section 2 — Your AI Solution

2.1 What did you build? Describe the solution in plain language.

I developed an AI-powered Udaan Corporate Prospect Intelligence Assistant using Dify AI to help Udaan's corporate travel and account management teams quickly access information about onboarded clients.

The chatbot acts as a centralized knowledge assistant that stores and retrieves client-related information from onboarding documents, account profiles, travel policies, service agreements, visa requirements, approval workflows, billing details, and operational guidelines.

Step 1: Client Knowledge Repository Creation

Step 2: Intelligent Information Retrieval

Step 3: AI-Powered Response Generation

Step 4: Faster Decision Support

2.2 What tools or platforms did you use to build it?

Tool / Platform Used	What It Was Used For
Chat GPT	For Prompt writing and collecting information in relation my project, especially for the steps that are required to build my chatbot assistant step by step.
Dify AI	Core platform used to build the chatbot, manage workflows, and deploy the knowledge assistant
Corporate Onboarding Documents	Source of client information used to train the knowledge repository
Prompt Engineering	Used to design chatbot instructions and improve response quality

2.3 What data or documents did the solution use?

e.g. Company product catalogue (PDF), internal sales reports, publicly available competitor website data

The chatbot was developed using a combination of internal corporate documents and structured business information relevant to client onboarding and travel management.

The primary data sources included:

- Corporate client onboarding documents
- Service agreements and account information
- Corporate travel program details
- Client-specific operational instructions

2.4 What does the solution produce as its output?

e.g. A structured summary, a draft email, a filled template, a categorized list…

The chatbot generates real-time, conversational responses to employee queries related to corporate clients.

The key outputs include:

1. Instant Client Information Retrieval
2. Policy and Process Clarification
3. Knowledge Consolidation

2.5 What are the limitations of your solution?

Be honest. What does it not do well? What would need to change for it to work at a larger scale or for a different use case?

Scalability Considerations

For large-scale organizational deployment, the solution would require:

- Integration with existing enterprise systems
- Role-based access controls
- Enhanced data security measures
- Continuous knowledge base governance
- User training and adoption programs

Section 3 — Deployment

3.1 Which deployment level did you achieve?

Level	Description	Did you achieve this?
1	Demonstrated in context — shown to supervisor or team member	☐ Yes ☐ No
2	Team-level use — at least one other person used it during the internship	☐ Yes ☐ No

Level	Description	Did you achieve this?
3	Organizationally adopted — continued use confirmed beyond your internship	☐ Yes ☐ No

3.2 Describe how you deployed or demonstrated the solution.

Walk through what happened: who saw it, in what setting, and how they interacted with it

The AI-powered Corporate Client Knowledge Assistant was developed using Dify AI and demonstrated to members of the Corporate Travel Operations and Account Management teams at Udaan.

For the demonstration, I created a knowledge repository containing sample onboarding documents, client travel policies, service agreements, approval workflows, and operational guidelines. These documents were uploaded into Dify's knowledge base and connected to the chatbot interface.

During the demonstration, users were able to interact with the chatbot by asking real business questions related to client accounts. The chatbot successfully retrieved information from the uploaded documents and provided context-aware responses.

3.3 If you did not reach Level 2 or 3, explain why.

Although the chatbot was successfully demonstrated and tested, broader organizational deployment was not achieved during the internship period.

The primary limitation was access to production-level client data and internal systems. Corporate client information contains confidential business details, making it necessary to obtain additional approvals before integrating any AI solution into live workflows.

The internship duration also limited the ability to conduct extensive user testing, system integration, and security validation. As a result, the solution remained at the prototype and demonstration stage rather than being deployed across the organization.

3.4 What would be required for the solution to be deployed more broadly?

Think practically: IT access, data permissions, staff training, organizational buy-in…

For organization-wide deployment, several enhancements would be required.

First, the chatbot would need to be connected to live client onboarding repositories and document management systems to ensure access to updated information.

Second, role-based access controls should be implemented to ensure that employees can only access information relevant to their responsibilities, periodic knowledge base maintenance would be required to keep client policies, travel guidelines, and operational procedures up to date.

Section 4 — Organization Response

This section captures what the organization actually observed — not what you think they should have observed. If your supervisor or colleagues used the tool, describe their response accurately, including any reservations they expressed.

4.1 Who at the organization saw or used your solution?

Name / Role	How They Engaged	Their Observation
Amisha Chauhan Assistant Manager (Core sales)	Reviewed the chatbot workflow and tested business queries	Observed that information retrieval was significantly faster than manual document searching
Harsh Sehgal Assistant Manager (Operations)	Tested the chatbot using sample client questions	Found the chatbot useful for quickly locating client-specific travel policies and operational requirements

4.2 What did they say about it? (Direct quotes preferred)

If your supervisor said something specific about the tool, quote them here rather than paraphrasing

"The chatbot provides a much faster way to access client-specific information compared to manually searching through multiple onboarding documents. It has the potential to improve response times and reduce operational dependency on individual team members." Amisha Chauhan

4.3 Did the organization express interest in continuing to use or develop the solution?

If yes, what form did that take — verbal indication, written confirmation, a meeting with a senior person?

No, while no formal implementation decision was made during the internship period, the concept was positively received and recognized as a potential future enhancement to the organization's client servicing processes.

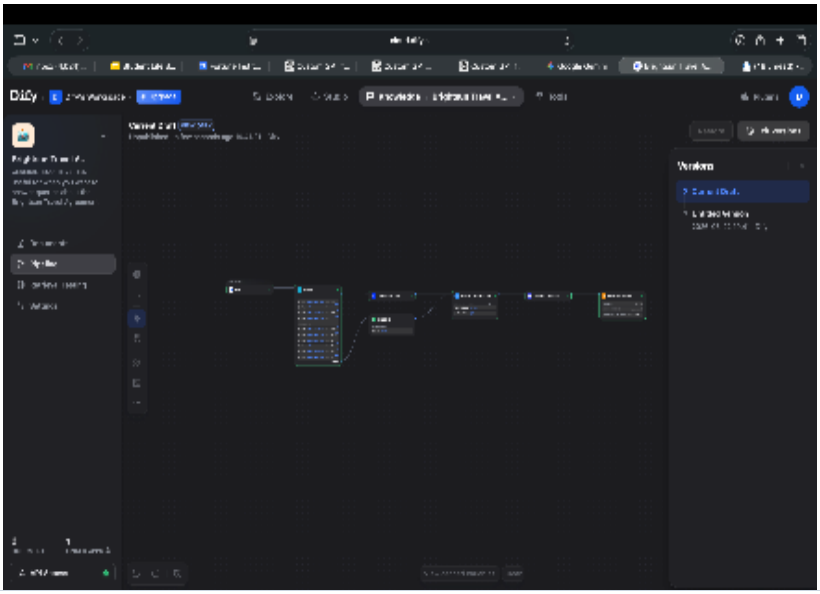

4.4 What would you do differently if you had more time?

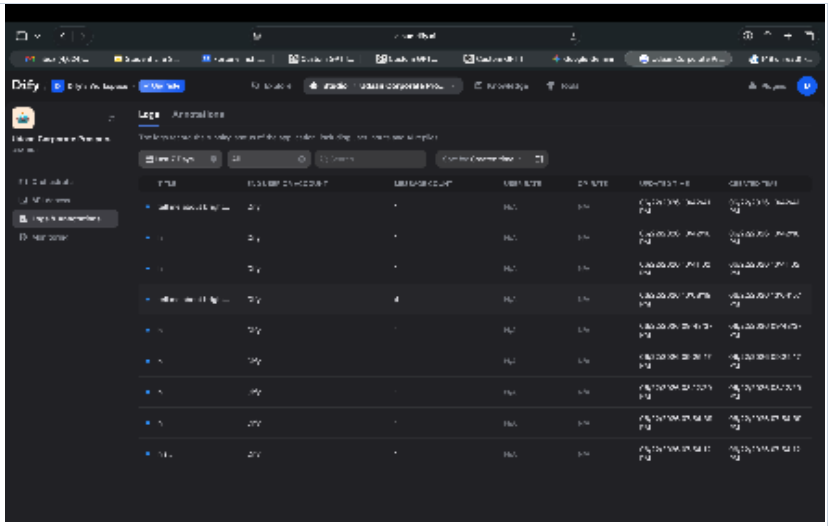

Honest reflection: what did the organization's response tell you about what the solution still lacks?

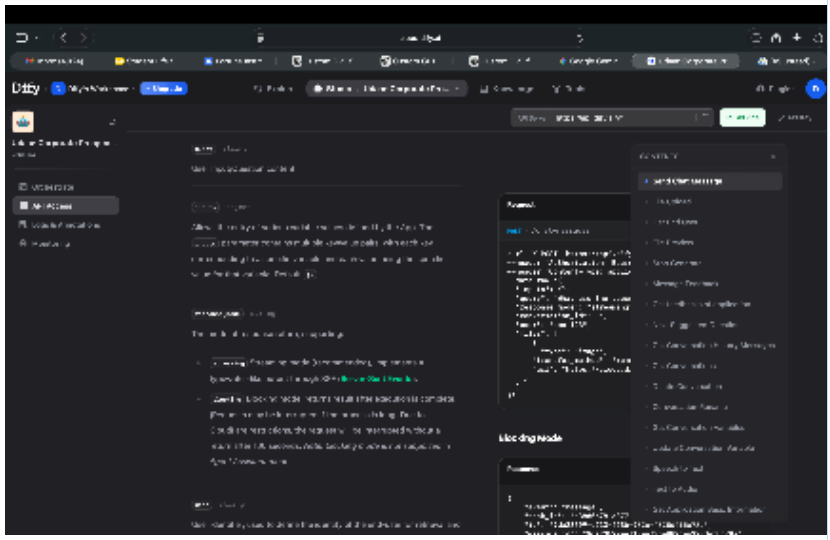

Additionally, I would explore integrating the chatbot with internal CRM and document management systems to provide more accurate and real-time information retrieval capabilities. Currently, the basic data I used was commercials and basic agreement, rather that solid revenue or client-based information.

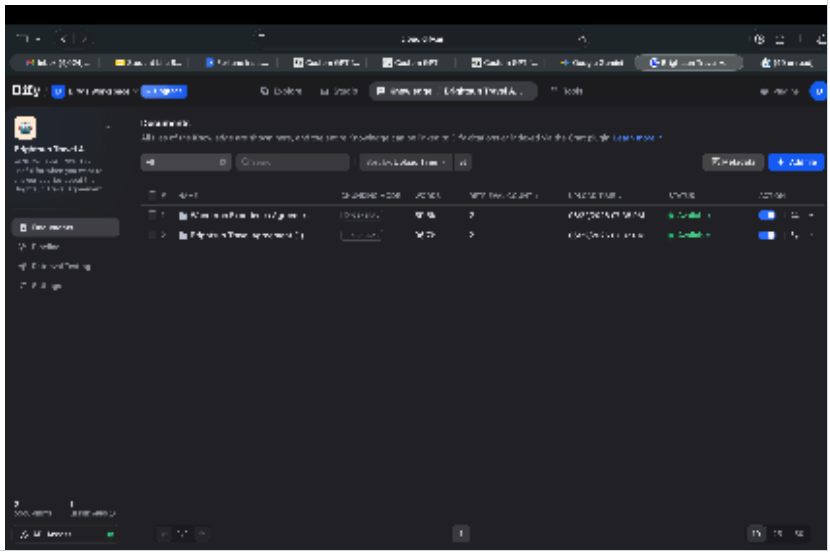

Section 5 — Proof of Solution

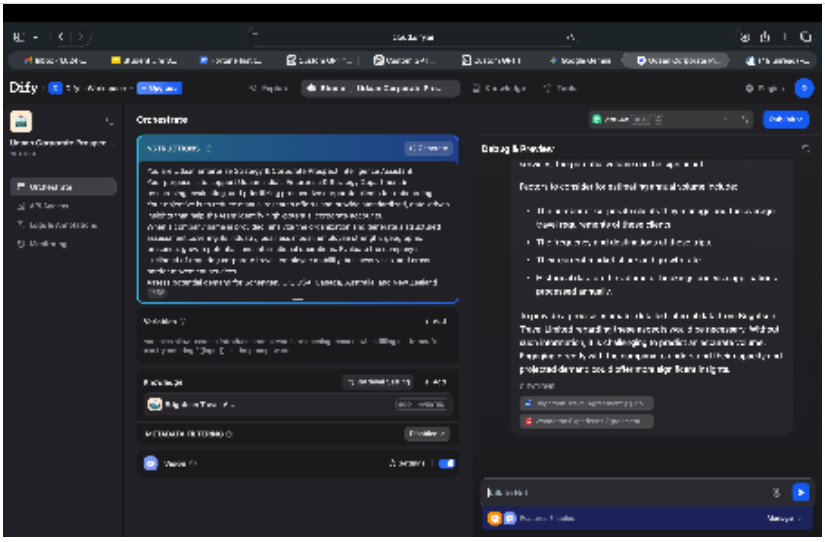

Attach your proof as a separate file alongside this write-up. Accepted formats are listed below. You must submit at least one form of proof. If you submit multiple, list them all here.

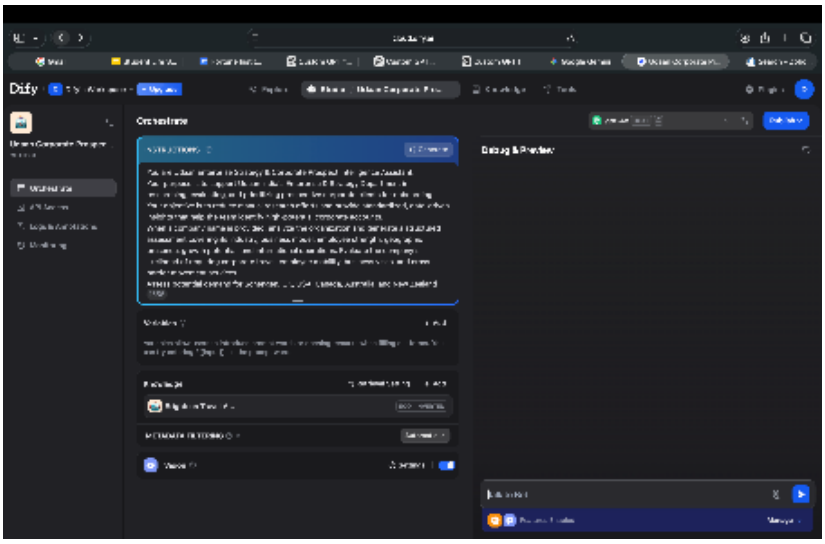

Proof Format	What to Include
Working link	Defy AI https://cloud.dify.ai/explore/installed/00e6844f-366e-4624-ba9b-0f393e43aa73 Chat GPT https://chatgpt.com/share/6a397522-d644-83ee-82fd-c3221a369468
Recorded demo	Screen recording (minimum 3 minutes) showing the tool working on a real input from your organization
Screenshots with annotations	

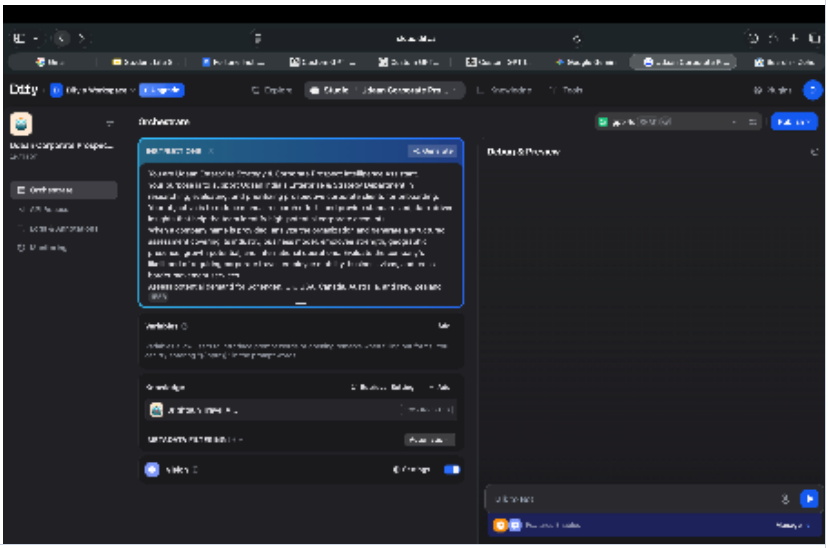

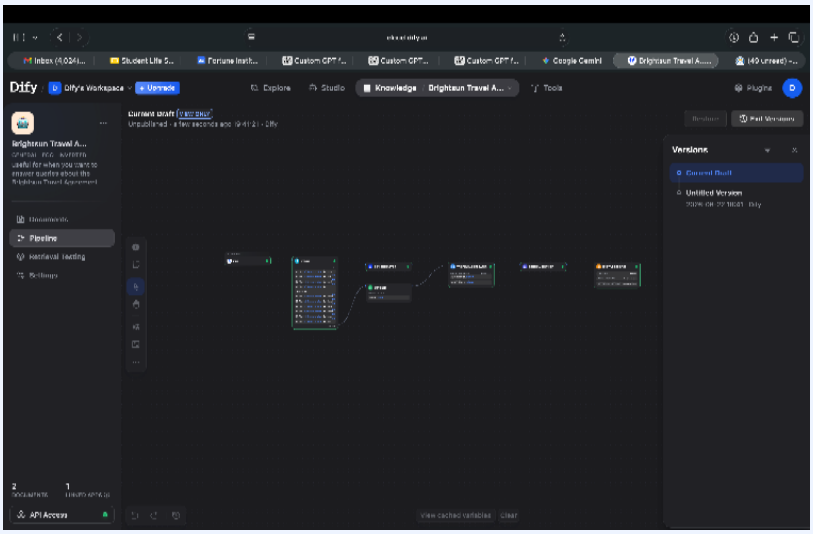

Documented workflow	 The Pipeline review.
Supervisor confirmation	I Amisha Chauhan demonstrated the chatbot it provides a much faster way to access client-specific information compared to manually searching through multiple onboarding documents. It has the potential to improve response times and reduce operational dependency on individual team members.

5.1 List all proof items you are attaching:

#	File Name / Link	Format
1	Udaan Corporate Prospect Intelligence link https://cloud.dify.ai/explore/installed/00e6844f-366e-4624-ba9b-0f393e43aa73	Defy AI
2	Prompt used to build the Chatbot https://chatgpt.com/share/6a397522-d644-83ee-82fd-c3221a369468	Chat GPT
3		

Marks Allocation

Component	Max Marks	Marks Awarded
Problem Statement — clarity, specificity, organizational validity	5	
Solution Description — logical fit between problem and tool, build quality	5	

Component	Max Marks	Marks Awarded
Deployment — level achieved and quality of documentation	5	
Organization Response — evidence quality and honesty of assessment	5	
Proof of Solution — completeness and demonstrability	5	
TOTAL	25	

> *Students who achieve Level 3 deployment with written organizational confirmation are eligible for a commendation from the Dean of Research, independent of their marks score. The best submissions may also be considered for publication on the FIIB website as anonymized case studies.*

Student Declaration

I confirm that the problem described in this write-up is a genuine operational challenge at my internship organization. The solution I have documented was built by me during my internship period. The proof I have attached accurately represents what the solution does. The organization's response I have described reflects what was actually observed, not what I wished had been observed.
